

Implementation Sprint I Evidence Addendum

AI-use disclosure. Drafted with Codex (GPT-5, Codex desktop app) from the W5 grading feedback, repository state, and generated command evidence.

AI-drafted, student-revised. Full audit trail: `docs/ai-use-log.md`.

Student: Zixuan Liang

Course: CISC 699-50-A-2026/Summer - Applied Project in Computer Information Science

Project: SafeExec - Hardened Python Execution Sandbox for LLM Agent Tool-Use

Advisor: Prof. Khalid Lateef

Instructor: Dr. Majid Shaalan

Revision date: 2026-06-17

1. Purpose of This Addendum

The original W5 check-in accurately described the implementation baseline, but the Canvas upload did not include several supporting artifacts referenced in the PDF. This addendum makes the baseline independently verifiable by attaching the repository link, commit/tag, setup files, repository snapshot, git log, smoke/test outputs, architecture notes, changelog, risk log, engineering log, and AI-use log.

2. Repository and Version Baseline

Item	Value
Repository URL	<code>https://github.com/liangzixuan/cisc-699</code>
Branch	<code>main</code>
W5 baseline commit	<code>3475ccf</code>
W5 baseline tag	<code>w5-baseline</code>
Commit subject	<code>Add W5 implementation sprint baseline</code>
Evidence file	<code>git-log-w5.txt</code>

Git-log excerpt:

```
3475ccf (tag: w5-baseline) Add W5 implementation sprint baseline
b5b2702 Add W4 design review package
```

a9d9e76 Record W2 proposal feedback
075bcc3 Record W3 advisor decisions

3. Evidence Matrix

Feedback item	Evidence now attached
Repository or repository link missing	Repository URL, repository-snapshot.txt, git-log-w5.txt
Commit/tag/version-control baseline missing	Commit 3475ccf, tag w5-baseline, git-log-w5.txt
Setup docs/files missing	README.md, Makefile, pyproject.toml, requirements.txt, deploy/README.md
Smoke/test output missing	smoke-output-2026-06-17.txt, test-output-2026-06-17.txt, excerpts below
Architecture notes missing	architecture-notes.md
Changelog/release note missing	CHANGELOG.md
Known-issues/risk log incomplete	known-issues-risk-log.md with severity, likelihood, owner, dates, and target resolution
AI-use log referenced but not uploaded	docs/ai-use-log.md
Engineering log referenced but not uploaded	engineering-log.md

4. Setup and Reproducibility Evidence

The W5 baseline requires Python 3.11 or newer and has no third-party runtime dependencies. The root Makefile provides the reproducible commands:

```
make smoke
make test
make api
```

The root requirements.txt intentionally records that W5 uses only the Python standard library. The root pyproject.toml records the package name, version, and Python requirement. deploy/README.md explains the API-shell wrapper and states that the final Docker boundary is W6 work.

5. Smoke-Test Output

Fresh smoke output was captured on 2026-06-17 and is attached as smoke-output-2026-06-17.txt.

```
PYTHONPATH=src python3 scripts/smoke_safeexec.py
{
```

```

    "backend": "local",
    "contained": true,
    "containment_reason": "dev_subprocess_completed",
    "exit_code": 0,
    "status": "ok",
    "stderr": "",
    "stdout": "hello from safeexec sprint 1\n"
}

```

The local backend remains a development-only smoke path. It proves the request/result/API/test contract is runnable; it does not prove security containment.

6. Test Log Output

Fresh test output was captured on 2026-06-17 and is attached as test-output-2026-06-17.txt.

```

PYTHONPATH=src python3 -m unittest discover -s tests/functional -p 'test_*.py'
.....
-----
Ran 5 tests in 0.869s

OK

```

The tests cover local execution, timeout reporting, API response shape, Docker hardening command controls, and gVisor runtime selection.

7. Risk and Issue Management

The original risk table was technically meaningful but too small for the rubric. The revised known-issues-risk-log.md adds severity, likelihood, owner, status, opened date, updated date, target resolution, and mitigation action. The most important open implementation risk remains Docker/gVisor verification on the Ubuntu droplet. The most important submission-process risk was the omitted evidence upload; this addendum resolves that by making the evidence explicit.

8. Resubmission Attachment Checklist

If revision is allowed, submit this addendum together with the following supporting artifacts:

- Implementation-Sprint-I-Evidence-Addendum.pdf
- Implementation-Sprint-I-Evidence-Addendum.docx
- Implementation-Sprint-I-Check-in.pdf

- README.md
- Makefile
- pyproject.toml
- requirements.txt
- deploy/README.md
- evidence-index.md
- repository-snapshot.txt
- git-log-w5.txt
- smoke-output-2026-06-17.txt
- test-output-2026-06-17.txt
- known-issues-risk-log.md
- architecture-notes.md
- CHANGELOG.md
- docs/ai-use-log.md
- engineering-log.md
